[2017 New Latest 70-533 Dumps PDF Free Download In Lead2pass (46-60)

2017 June Microsoft Official New Released 70-533 Dumps in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed! Lead2pass dumps for 70-533 exam are written to the highest standards of technical accuracy, provided by our certified subject matter experts and published authors for development. We guarantee the best quality and accuracy of our products. We hope you pass the exams successfully with our practice test. With our Microsoft 70-533 dumps, you will pass your exam easily at the first attempt. You can also enjoy 365 days free update for your product. Following questions and answers are all new published by Microsoft Official Exam Center: http://www.lead2pass.com/70-533.html QUESTION 46Drag and Drop QuestionYour company manages several Azure Web Sites that are running in an existing web- hosting plan named plan1.You need to move one of the websites, named contoso, to a new web-hosting plan named plan2.Which Azure PowerShell cmdlet should you use with each PowerShell command line? To answer, drag the appropriate Azure PowerShell cmdlet to the correct location in the PowerShell code. Each PowerShell cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.Answer: QUESTION 47You administer an Azure Web Site named contosoweb that is used to sell various products.Contosoweb experiences heavy traffic during weekends.You need to analyze the response time of the product catalog page during peak times, from different locations.What should you do? A. Configure endpoint monitoring.B. Add the Requests metric. C. Turn on Failed Request Tracing.D. Turn on Detailed Error Messages. Answer: AExplanation:Endpoint monitoring configures web tests from geo-distributed locations that test response time and uptime of web URLs. The test performs an HTTP get operation on the web URL to determine the response time and uptime from each location. Each configured location runs a test every five minutes. After you configure endpoint monitoring, you can drill down into the individual endpoints to view details response time and uptime status over the monitoring interval from each of the test location http://azure.microsoft.com/en-us/documentation/articles/web-sites-monitor/#webendpointstatus QUESTION 48Hotspot Question You manage an Azure Web Site for a consumer-product company.The website runs in Standard mode on a single medium instance. You expect increased traffic to the website due to an upcoming sale during a holiday weekend.You need to ensure that the website performs optimally when user activity is at its highest.Which option should you select? To answer, select the appropriate option in the answer area. Answer: Explanation:Note: The `small' instance is selected. This setting would be for the weekdays. Then you would select a larger instance for the `weekend' schedule setting to cover the increased activity. QUESTION 49Your company has a subscription to Azure.You configure your contoso.com domain to use a private Certificate Authority. You deploy a web site named MyApp by using the Shared (Preview) web hosting plan.You need to ensure that clients are able to access the MyApp website by using https.What should you do? A. Back up the Site and import into a new website.B. Use the internal Certificate Authority and ensure that clients download the certificate chain.C. Add custom domain SSL support to your current web hosting plan.D. Change the web hosting plan to Standard. Answer: DExplanation:Enabling HTTPS for a custom domain is only available for the Standard web hosting plan mode of Azure websites.http://azure.microsoft.com/en-us/pricing/details/websites/ QUESTION 50Drag and Drop QuestionYou administer an Azure Web Site named contosoweb that uses a production database. You deploy changes to contosoweb from a deployment slot named contosoweb-staging.You discover issues in contosoweb that are affecting customer data. You need to resolve the issues in contosoweb while ensuring minimum downtime for users.You swap contosoweb to contosoweb-staging.Which four steps should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. Answer: QUESTION 51Drag and Drop QuestionYou manage an Azure Web Site named salessite1. You notice some performance issues with salessite1. You create a new database for salessite1. You need to update salessite1 with the following changes, in the order shown: 1. Display the list of current connection strings. 2. Create a new connection string named conn1 with a value of:Server=tcp:samplel.database.windows.net,1433;Database=NewDB; User ID=User@samplel;Password=Passwordl;Trusted_Connection=False;Encrypt=True;Connec tion Timeout=30;. 3. Download the application logs for analysis. Which three xplat-cli commands should you perform in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order. Answer: QUESTION 52Hotspot QuestionYou manage an Azure Service Bus for your company. You plan to enable access to the Azure Service Bus for an application named ContosoLOB.You need to create a new shared access policy for subscriptions and queues that has the following requirements: - Receives messages from a queue- Deadletters a message- Defers a message for later retrieval- Enumerates subscriptions- Gets subscription description In the table below, identify the permission you need to assign to ensure that ContosoLOB is able to accomplish the above requirements. Make only one selection in each column. Answer: Explanation: http://msdn.microsoft.com/en-us/library/azure/dn205160.aspx QUESTION 53Your network includes a legacy application named LegacyApp1. The application only runs in the Microsoft .NET 3.5 Framework on Windows Server 2008.You plan to deploy to

Azure Cloud Services.You need to ensure that LegacyApp1 will run correctly in the new environment.What are two possible ways to achieve this goal? Each correct answer presents a complete solution. A. Upload a VHD with Windows Server 2008 installed.B. Deploy LegacyApp1 to a cloud service instance configured with Guest OS Family 2.C. Deploy LegacyApp1 to a cloud service instance configured with Guest OS Family 1.D. Deploy LegacyApp1 to a cloud service instance configured with Guest OS Family 3. Answer: BCExplanation:Guest OS Family 1 and Guest OS Family 2 supports .NET 3.5 and .Net 4.0. Guest OS Family 3 and Guest OS Family 4 supports .NET 4.0 and .Net 4.5.http://msdn.microsoft.com/en-us/library/azure/ee924680.aspx QUESTION 54 Drag and Drop QuestionYou administer a cloud service named contosoapp that has a web role and worker role.Contosoapp requires you to perform an in-place upgrade to the service.You need to ensure that at least six worker role instances and eight web role instances are available when you apply upgrades to the service. You also need to ensure that updates are completed for all instances by using the least amount of time.Which value should you use with each configuration? To answer, drag the appropriate value to the correct configuration. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Answer: Explanation:* Scenario:You need to ensure that at least six worker role instances and eight web role instances are available when you apply upgrades to the service.* You can decide whether you want to update all of the roles in your service or a single role in the service. In either case, all instances of each role that is being upgraded and belong to the first upgrade domain are stopped, upgraded, and brought back online. Once they are back online, the instances in the second upgrade domain are stopped, upgraded, and brought back online. QUESTION 55You migrate a Windows Server .NET web application to Azure Cloud Services.You need enable trace logging for the application.Which two actions should you perform? Each correct answer presents part of the solution. A. Update the service definition file.B. Update the Azure diagnostics configuration.C. Update the service configuration file.D. Enable verbose monitoring.E. Update the application web.config file. Answer: AB Explanation:You can use Azure logging right out of the box--it's part of Azure SDK.A: Azure Service Definition Schema (.csdef File) The service definition file defines the service model for an application. The file contains the definitions for the roles that are available to a cloud service, specifies the service endpoints, and establishes configuration settings for the service.B: Take Control of Logging and Tracing in Microsoft Azure The Microsoft.WindowsAzure.Diagnostics namespace, which inherits from and extends standard System.Diagnostics classes, enables the use of System.Diagnostics as a logging framework in Azure environment. http://msdn.microsoft.com/en-us/library/azure/ee758711.aspxhttp://msdn.microsoft.com/en-us/magazine/ff714589.aspx QUESTION 56Drag and Drop QuestionYou plan to deploy a cloud service named contosoapp. The service includes a web role named contosowebrole. The web role has an endpoint named restrictedEndpoint.You need to allow access to restricted Endpoint only from your office machine using the IP address 145.34.67.82.Which values should you use within the service configuration file? To answer, drag the appropriate value to the correct location in the service configuration file. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Answer: QUESTION 57You manage a cloud service that utilizes an Azure Service Bus queue.You need to ensure that messages that are never consumed are retained.What should you do? A. Check the MOVE TO THE DEAD-LETTER SUBQUEUE option for Expired Messages in the Azure Portal.B. From the Azure Management Portal, create a new queue and name it Dead-Letter.C. Execute the Set-AzureServiceBus PowerShell cmdlet.D. Execute the New-AzureSchedulerStorageQueueJob PowerShell cmdlet. Answer: A Explanation: The EnableDeadLetteringOnMessageExpiration property allows to enabledisable the dead-lettering on message expiration. QUESTION 58You manage a web application published to Azure Cloud Services.Your service level agreement (SLA) requires that you are notified in the event of poor performance from customer locations in the US, Asia, and Europe.You need to configure the Azure Management Portal to notify you when the SLA performance targets are not met.What should you do? A. Create an alert rule to monitor web endpoints.B. Create a Notification Hub alert with response time metrics.C. Add an endpoint monitor and alert rule to the Notification Hub.D. Configure the performance counter on the cloud service. Answer: AExplanation: * An alert rule enables you to monitor an available metric within a supported Azure service. When the value of a specified metric violates the threshold assigned for a rule, the alert rule becomes active and registers an alert. When you create an alert rule, you can select options to send an email notification to the service administrator and co- administrators, or another administrator, when the rule becomes active, and when an alert condition is resolved.* You can configure cloud service alert rules on:Web endpoint status metricsMonitoring metrics from the cloud service host operating system Performance counters collected from the cloud service guest virtual machinehttp://msdn.microsoft.com/en-us/library/azure/dn306639.aspx QUESTION 59You manage a cloud service that hosts a customer-facing application. The application allows users to upload images and create collages. The cloud service is running in two medium instances and utilizes Azure Queue storage for image processing. The storage account is configured to be locally redundant.The sales department plans to send a newsletter to potential clients. As a result, you expect a significant increase in global traffic.You need to recommend a solution that meets the following requirements: - Configure the cloud service to ensure the

application is responsive to the traffic increase.- Minimize hosting and administration costs. What are two possible ways to achieve this goal? Each correct answer presents a complete solution. A. Configure the cloud service to run in two Large instances.B. Configure the cloud service to auto-scale to three instances when processor utilization is above 80%.C. Configure the storage account to be geo-redundantD. Deploy a new cloud service in a separate data center. Use Azure Traffic Manager to load balance traffic between the cloud services.E. Configure the cloud service to auto-scale when the queue exceeds 1000 entries per machine. Answer: BEExplanation: * An autoscaling solution reduces the amount of manual work involved in dynamically scaling an application. It can do this in two different ways: either preemptively by setting constraints on the number of role instances based on a timetable, or reactively by adjusting the number of role instances in response to some counter(s) or measurement(s) that you can collect from your application or from the Azure environment. QUESTION 60You manage a cloud service on two instances. The service name is Service1 and the role name is ServiceRole1.Service1 has performance issues during heavy traffic periods.You need to increase the existing deployment of Service1 to three instances.Which Power Shell cmdlet should you use? A. PS C:>Set-AzureService -ServiceName "Service1" -Label "ServiceRole1' -Description "Instance count=3"B. PS C:>Set-AzureRole -ServiceName "Service1" -Slot "Production" -RoleName "ServiceRole1" -Count 3C. PS C:>Add-AzureWebRole -Name 'ServiceRole1" -Instances 3D. PS C:> $instancecount = New-Object Hashtable$settings['INSTANCECOUNT=3] PS C:> Set-AzureWebsite -AppSettings $instancecount ServiceRole1 Answer: BExplanation: The Set-AzureRole cmdlet sets the number of instances of a specified role to run in an Azure deploymentExampleThis command sets the "MyTestRole3" role running in production on the "MySvc1" service to three instances.Windows PowerShellC:PS>Set-AzureRole ServiceName "MySvc1" Slot "Production" RoleName"MyTestRole3" Count 3 We offer standard exam questions of Microsoft 70-533 dumps. The standard exams are important if you have never taken a real exam. The accuracy of the Q&As are fully guaranteed and the number is enough to impact you passing the exam. 70-533 new questions on Google Drive: https://drive.google.com/open?id=0B3Syig5i8gpDeFgyaGRNaE5iaFk 2017 Microsoft 70-533 exam dumps (All 217 Q&As) from Lead2pass: http://www.lead2pass.com/70-533.html [100% Exam Pass Guaranteed]
